I acknowledge the use of Claude (<https://claude.ai/new>)

- to refine the academic language and fix grammar of comments and notes on the report. I submitted the report and prompted it to identify the grammatical inaccuracy. The output was then assessed and modified to better suit the report requirement.
- Sample code for visualisation for the agent reward, steps and movement was generated. The prompt was “I need a graph for visualising the rewards taken by agents over a period of an episode. i have a reward and steps data.Could you give me a demo code for visualisation”. There were few iterations for the tracing of the visual for the agent's path. Both outputs were thoroughly verified and further updated to properly represent the agent's data.
